

Alabama State Port Authority
Terminal Operating System, Project# 10505 - Request for Proposal
Response to Questions

Please find questions and ASPA responses below. Participants will receive an email with the responses.

Questions from all participants are included.

- 1) Mobile application:
 - a) Please provide details of the on-site WiFi connections.
 - i) WiFi is currently available in all buildings and offices. It is not currently available in the working areas of the waterfront or the outside storage areas.
- 2) Oracle:
 - a) Does the ORACLE system have integration end points?
 - i) Yes
 - b) Is the integration expected to be a push from Bellerophon or a Pull from ORACLE?
 - i) To be determined by each defined process, however, we expect it will likely be a push.
 - c) Is the integration to be estimated and contracted for as part of the purchase of the TOS
 - i) Integration should be estimated as part of the project. Our ASPA internal IT team will provide specifications for the data required from the TOS and will set up the process to bring that data into the Oracle system.
- 3) How many users are required?
 - a) Office
 - i) The current user count is approximately 35. Actual user count requirements for the new TOS are to be determined.
 - b) Outdoor (mobile)
 - i) The current user count is zero and future requirements are not determined at this time. We are open to recommendations. An estimated number could be 15 each.
 - c) For equipment
 - i) Not determined at this time. We are open to recommendations.
 - d) Remote (3rd parties)
 - i) The current user count to our existing system is approximately 20, including customers and stevedores. The future requirements are not determined at this time.
